## **The problem statement -**

The bank is facing a concerning trend of increasing customer attrition in their credit card services. To address this issue, they seek a predictive model that can identify customers likely to churn. By proactively engaging with these identified customers, the bank aims to provide personalized services and incentives, with the goal of retaining customers and reversing the decision to leave the credit card services.

# Motivation

- Retain valuable customers for the bank.
- Minimize the revenue loss.
- Strategic Decision-Making.
- Improve overall customer satisfaction for the bank.

# Brief Description of Dataset

```
Index(['Attrition_Flag', 'Customer_Age', 'Gender', 'Dependent_count',  
      'Education_Level', 'Marital_Status', 'Income_Category', 'Card_Category',  
      'Months_on_book', 'Total_Relationship_Count', 'Months_Inactive_12_mon',  
      'Contacts_Count_12_mon', 'Credit_Limit', 'Total_Revolving_Bal',  
      'Avg_Open_To_Buy', 'Total_Amt_Chng_Q4_Q1', 'Total_Trans_Amt',  
      'Total_Trans_Ct', 'Total_Ct_Chng_Q4_Q1', 'Avg_Utilization_Ratio'],  
      dtype='object')
```

# Implementation

# Pre processing

# Exploratory data analysis

Distribution of Attrition flag

Distribution of Categories on gender

Distribution of Categories on Marital Status

Chart based on income

## Correlation between numerical features

# Model implemented - Accuracies

# Important features

# Business Questions

1. What is the relationship between "Total Trans Ct" and "Total Trans Amt," and how does their interaction influence the likelihood of customer churn?
1. How can the company use the information from the heat map to reduce customer churn?

# Recommendations

Category of customers to be targeted -

1. Clients with lower incomes
2. Clients who lack formal education
3. Consumers with a low ratio of average utilization

THANK  
YOU!
